

Moisture Guard & Antimicrobial Protection

Moisture Guard is a special moisture barrier on the surface of the carpet cushion that aids in preventing spills or pet accidents from saturating the cushion, causing potential damage to the sub-floor. This barrier gives you time to blot the moisture back through the carpet so the spill can be removed easily and substantially by extraction, preventing the moisture or the spill from reappearing on the carpet. The added barrier protects your home and enhances your carpet life.

Flexible Foam's carpet cushion is available with FlexGuard™. FlexGuard™ Protection infuses antimicrobial compounds into your cushion. This helps resist mold and mildew damage in your cushion caused by the most common household spills and accidents that penetrate the carpet.

Protects your Home and Extends the Life of your Carpet
