

Strata Flex™

A product whose luxury lasts without leaving lasting body impressions.

StrataFlex™ is a state-of-the-art foam specially designed to replace the polyester fiberfill traditionally used in the top quilted layer of mattresses, as well as in mattress toppers and furniture including cushion wraps and backs.

The softness of fiber...the durability of foam.

- As soft as the highest quality fiber
- Longer lasting support
- No fiber breakdown – Eliminates body impression
- No fiber migration – Quilt pockets remain filled and evenly distributed
- Better permeability and moisture pickup/dissipation for more comfortable sleeping and seating
- Environmentally friendly by using EnviroFlex™ Technology
- Hypo-allergenic

**Flexible
Foam**
Products, Inc.

*The ideal fiber replacement...
a foam that not only performs better,
but lasts longer.*

As time passes, polyester fiber mats down, leaving body impressions even when there is no body there. With StrataFlex, this is not so. This highly advanced lightweight foam's outstanding strength and durability means it maintains its original loft even after years of use. That virtually eliminates body impressions to help keep beds and furniture looking brand new. And that makes for a more beautiful home...and a happier customer.

Specifications

StrataFlex 10

Density 1.0 lbs +/-0.05
IFD 25% 9-11
90% Compression <12%

StrataFlex 15

Density 1.4 lbs +/-0.05
IFD 25% 15 +/-2
90% Compression <10%

StrataFlex is available to meet all Cal 117 requirements.

With StrataFlex available in full-length rolls, there's less setup time requires than when manufacturing with fiber. There's virtually no excess waste material so there's less wear on machinery and less downtime as well. It converts and handles easily so you can be more productive on the assembly line. Plus StrataFlex helps products look great in the showroom for a quicker sale.
